

Muhammad Farhan Bin Mohd. Fu'had

Email: mfarhanfuhad@gmail.com

Address: JB 9492, Taman Lagenda Jalan Lagenda, 77400 Sungai Rambai, Melaka

Mobile: 60 107904500

Professional Summary

Technical Artist with 5+ years of experience across real-time game development and virtual production. Experienced in Unity and Unreal Engine, Blender-based VFX asset creation, real-time VFX workflows, materials and shaders, game profiling and performance optimization, motion capture, and technical production pipelines. Experienced in bridging technical and creative teams to improve workflow efficiency, automation, and delivery processes. Skilled in CI/CD concepts, version control systems, cloud-based multiplayer infrastructure, and production optimization.

CORE SKILLS

Technical Pipeline Development | VFX Asset Creation & Implementation | Unity & Unreal Engine | Blender | Materials & Shaders | Game Profiling & Optimization | Animation & Motion Capture | CI/CD & Build Workflows | Version Control | Virtual Production

TECHNICAL TOOLS

Game Engines: Unity, Unreal Engine

3D / Production: Blender, iClone, Aximmetry, OptiTrack Motion Capture

Pipeline / Development: TeamCity, PlasticSCM, CI/CD workflows

Technical Focus: Real-time VFX, materials, shaders, profiling, optimization, asset workflows

EDUCATION

Universiti Teknikal Malaysia Melaka

2013 – 2017

Bachelor of Information Technology (Game technology)

PERSONAL ATTRIBUTES

-
- Adaptable and flexible in fast-changing environments
 - Strong ownership and accountability
 - Effective time management and prioritization
 - Collaborative and communication-oriented
 - Continuous learning mindset

PROFESSIONAL EXPERIENCE

TODAK STUDIO | Technical Artist

Aug 2020 – May 2026

Responsibilities:

- Designed and build automated game production pipelines from ground up, reducing asset delivery bottleneck between creative and engineering teams.
- Drove DevOps pipeline implementation and optimization, improving deployment efficiency and maintaining stable multi-platform build workflows.

- Led game profiling and performance monitoring using Unity User Reporting and dashboard data, identifying FPS issues across different device types and using performance insights to guide real-time content optimization.
- Developed real-time VFX workflows, highly optimized custom shader/materials in unity and unreal to achieve targeted visual fidelity.
- Led technical implementation live broadcast engine integration, connecting real-time engine workflows with broadcast production requirements.
- Worked with Unity Addressables and Netcode for GameObjects in a multiplayer game development environment, supporting runtime asset management and networked gameplay workflows.
- Contributed to game development and cinematic production, collaborating across technical, creative, and production teams to deliver real-time content and technical solutions.

PROLIFICLV SDN BHD | Interactive Designer

Nov 2018 – Sep 2019

Responsibilities:

- AR/VR interactive development and supported real time content production
- Animation and VFX production
- Worked on projection mapping onto physical walls and surfaces, aligning and calibrating real-time visuals for immersive environments.
- Game development support

MAXMAN.TV | AR/VR Developer

July 2018 – Nov 2018

Responsibilities:

- AR/VR application development real time content production
- Animation and VFX implementation within interactive applications

HEITECH PADU SDN BHD | VR Game Developer (Internship)

Sep 2016 – Feb 2017

Responsibilities:

- Game optimization
- Audio and animation implementation
- Google Play Console deployment
